

WE DONT BELIEVE IN SPYING ON PEOPLE

This site uses no cookies.

No trackers. No marketing tools nor plugins. No pixels.

No nothing.

What is private remains private. This guiding principle was among our core beliefs – at the core of our values – when designing this website.

This will not change.

WHAT INFORMATION WE USE (AND HOW DO WE STORE IT)

All the information required for this website to work as intended is stored on Your local machine: in LocalStorage. LocalStorage is a persistence mechanism implemented in Your browser. It enables this website to store information on Your device without sending them to the backend. This information is never sent to our servers.

The information this site stores in Your LocalStorage is stored there for 2 (two) purposes:

1)

To determine whether or not to show You the cookies modal when You enter the site.

For this purpose, the site stores the timestamp of the consent You give us when You choose CONSENT AND CONTINUE on the cookies modal.

This information is stored as `zeroCookiesConsentTimestamp` in LocalStorage.

The site needs to store the timestamp – and not a simple True or False value – to determine whether or not the document You are now reading has changed since You last made the decision to CONSENT AND CONTINUE. The site uses this knowledge to determine whether or not it should ask for Your consent again.

2)

To determine whether or not to show You the extended loading animation when You reload the page.

For this purpose, the site stores two pieces of information: the timestamp of Your previous pageview and the number of Your total pageviews in the last 10 (ten) minutes (including reloads, e.g. with F5/Command+R).

The timestamp of Your previous pageview is stored as `backThen`. The number of Your total pageviews in the last 10 (ten) minutes is stored as `sinceBackThen`.

The logic here is rather straightforward: `backThen` is used to determine whether or not the site should increment

`sinceBackThen`. If the number stored as `sinceBackThen` is larger than 4, the loading animation the site shows You when You reload the page will be shorter.

This is all that is stored.
